BRAKE PADS AND SHOES FOR COMPETITION

The Competition department by Fri.Tech. R&D, in cooperation with Racing Teams and Tuning Companies, have developed new friction materials for high performance: **R30, R40, R60, R80**. The materials are made by mixture of fibres and specific raw materials (f.e., carbon and ceramic materials), developed and produced with modern technology to meet the increasing demand of racers and sportsmen. The experience gained along many years, turns now into a wide range of high performance brake pads that Fri.Tech. Competition offers to those who want to be protagonists in the racing world.

*I laboratori R&D di Fri.Tech. del reparto Competition, in collaborazione con Scuderie e Aziende di preparazione, hanno sviluppato nuovi materiali d'attrito per alte prestazioni: **R30, R40, R60, R80**. I materiali sono costituiti da miscele di fibre e materie prime specifiche (ad esempio, carbonio e materiali ceramici), sviluppati e prodotti con tecnologie moderne per soddisfare la crescente domanda di piloti e sportivi. L'esperienza maturata in tanti anni si trasforma in una vasta gamma di pastiglie freno ad alte prestazioni che Fri.Tech. Competition offre a chi vuole essere presente nel mondo delle competizioni e delle corse.*

COMPETITION COMPOUNDS FOR CUSTOMIZED PERFORMANCE

Each brake pad is designed to provide consistent and precise braking response, minimizing brake disc wear. We develop tailor-made products to meet the specific needs of each vehicle and racing condition, ensuring optimal performance in every competitive environment. Our brake pads, designed with Made in Italy excellence, provide outstanding cold and hot performance, ensuring maximum control and safety in every race. Most of our Fri.Tech. Competition brake pads use dual retention systems, with an adhesive bond and an innovative mechanical system. The mechanical system consists of metalnet welded directly to the backplate to ensure a very high resistance to the most extreme stresses between pad compound and backplate.

Ogni pastiglia è progettata per fornire una risposta di frenata costante e precisa, riducendo al minimo l'usura dei dischi dei freni. Sviluppiamo prodotti su misura per soddisfare le esigenze specifiche di ogni veicolo e condizione di gara, garantendo prestazioni ottimali in ogni ambiente competitivo. Le nostre pastiglie freno, progettate con l'eccellenza del Made in Italy, offrono prestazioni eccezionali a freddo e a caldo, garantendo il massimo controllo e la massima sicurezza in ogni gara. La maggior parte delle nostre pastiglie Fri.Tech. Competition utilizza un doppio sistema di ritenzione, con un legame adesivo e un innovativo sistema meccanico. Il sistema meccanico consiste in una rete metallica saldata direttamente alla piastra posteriore per garantire un'altissima resistenza alle sollecitazioni più estreme tra la miscela della pastiglia e la piastra posteriore.

TECHNICAL INFORMATION FOR BRAKE PADS AND SHOES

R30

- Average friction coefficient 0,55
- Good cold performance
- High initial bite
- Excellent for all cars with rear brake shoes and for Hand-Brake

R40

- Average friction coefficient 0,49
- Good cold performance
- Medium/High initial bite
- Very controllable torque output
- Long Life
- Applications: Formula, GT, Touring Car, Historic Cars, Tuning

R60

- Average friction coefficient 0,54
- High friction coefficient
- High initial bite
- Very controllable torque output
- Excellent even at low temperatures
- Low operating temperature of pads and fluid
- Applications: Rally Gravel, Historic Car, Track day

R80

- Average friction coefficient 0,62
- Extremely High friction coefficient
- High initial bite
- Developed for the most extreme competitions
- Low operating temperature of pads and fluid
- Applications: Rally Tarmac, Circuit

Coefficient of Friction / Temperature

Optimal operating temperature

Pad and Disc LifeTime

INFORMAZIONI TECNICHE PER LE PASTIGLIE E GANASCE FRENO

R30

- Coefficiente d'attrito medio 0,55
- Buone prestazioni a freddo
- Attacco iniziale alto
- Ottimo per tutte le vetture con freno posteriore con ganasce e freno a mano

R40

- Coefficiente d'attrito medio 0,49
- Buone prestazioni a freddo
- Attacco iniziale medio/alto
- Facilmente modulabile
- Lunga durata
- Utilizzo: Formula, GT, Touring Car, Vetture storiche, Tuning

R60

- Coefficiente d'attrito medio 0,54
- Alto coefficiente di attrito
- Attacco iniziale alto
- Facilmente modulabile
- Buone prestazioni a freddo
- Bassa temperatura d'esercizio di pastiglie e fluido
- Utilizzo: Rally Terra, Vetture storiche, Track day

R80

- Coefficiente d'attrito medio 0,62
- Coefficiente di attrito estremamente alto
- Attacco iniziale alto
- Sviluppato per le prestazioni più estreme
- Bassa temperatura d'esercizio di pastiglie e fluido
- Utilizzo: Rally Asfalto, Pista

Coefficiente di attrito / Temperatura

Temperatura operativa ottimale

Durata della pastiglia e del disco

ADVICES FOR OPTIMAL RESULTS ON COMPETITION

To get the best performances from your brake system it is necessary to strictly follow these instructions:

■ CHECKING OF BRAKE CALIPER AND PISTONS

Before fitting new pads, you should verify the integrity of pistons and their gaskets / o-rings; if they are damaged or worn you will have to provide for their revision.

■ CHECKING OF BRAKE DISCS

The discs are of course of big importance and it is therefore necessary to verify that there are no clear carves, cracks, damages on the disc surfaces.

■ TYPE OF BRAKE FLUID AND CLEANING

It is recommended the use of brake fluid with a high boiling point. At the end of the brake pad assembling, it is recommended to clean the circuit from any air bubble could have remained in, whose presence must be carefully prevented. It is besides advisable to change the brake fluid before each race and insert only brake fluid from new and sealed can.

■ BRAKE PADS BEDDING

The reach of optimal performance and long life of brake pads, passes through a correct running-in, according to the following modality:

Running-in of pads on racing cars:

Perform about 20 braking of low / medium intensity, than further 10 stronger braking, to progressively increase the temperature of brake pads. Then let the braking system cool down, and after make few braking of low intensity to clean-up the surface of the disks and the surface of brake pads . The possible presence of smoke during the running-in time is normal and not sign of malfunction.

CONSIGLI PER UN RISULTATO OTTIMALE NELLA COMPETIZIONE

Per ottenere le migliori prestazioni dal vostro impianto frenante è necessario seguire scrupolosamente le seguenti istruzioni:

■ CONTROLLO DEI PISTONCINI E DELLA PINZA FRENO

Prima di inserire le nuove pastiglie, si deve verificare l'integrità dei pistoncini e dei relativi anelli di tenuta, nel caso in cui siano danneggiati si dovrà provvedere alla revisione.

■ CONTROLLO DEI DISCHI FRENO

I dischi rivestono una notevole importanza ed è quindi utile verificare che non siano presenti evidenti rigature o danneggiamenti delle piste frenanti.

■ TIPOLOGIA DEL LIQUIDO FRENI E SPURGO

È raccomandato l'impiego di liquidi freno ad alto punto di ebollizione. Al termine del montaggio delle pastiglie effettuare lo spurgo di eventuali bolle d'aria presenti nel circuito la cui presenza deve essere accuratamente evitata. È consigliato cambiare il liquido dei freni prima di ogni gara. Inserire solo liquido dei freni da un contenitore nuovo e sigillato.

■ RODAGGIO PASTIGLIE

Il raggiungimento di prestazioni ottimali e la durata delle pastiglie passa necessariamente attraverso l'esecuzione di un corretto rodaggio secondo le seguenti modalità:

Rodaggio delle pastiglie su vetture da competizione

Effettuare 20 frenate circa di medio/bassa intensità, continuare con altre 10 frenate più intense facendo aumentare progressivamente la temperatura, lasciare raffreddare l'impianto frenante ed eseguire frenate di bassa intensità per pulire la superficie dei dischi e ravvivare la superficie delle pastiglie. L'eventuale presenza di fumo durante la fase di rodaggio non è sintomo di malfunzionamento.
