AUTOMOTIVE PASSION

AUTOMECHANIKA FRANKFURT - Hall 5.0 Stand C35

Metelli Group is preparing to welcome customers, partners and visitors to **Automechanika Frankfurt 2026**, taking place from 8 to 12 September, at **Hall 5.0 – Stand C35**, with a presence focused on innovation, range expansion and **OE quality applied to the IAM market**.

One of the highlights of the stand will be the cooling range: an increasingly complete product line including **water pumps, auxiliary water pumps and timing belt kits with water pump**. With more than 1,500 part numbers and 96% coverage of the European vehicle parc, Metelli confirms its ability to respond to the evolution of internal combustion, hybrid and electric engines with advanced technical solutions.

The offer includes **switchable water pumps**, also featuring patented solutions for VAG 1.6 TDI and 2.0 TDI applications, water pumps with electromagnetic pulley, primary electric water pumps and auxiliary electric water pumps. In particular, Metelli's dry-rotor primary electric water pumps provide a concrete response to the need for durability, resistance and reliability, thanks to reduced sensitivity to impurities in the fluid and optimized management of the electronic board.

Special attention will also be dedicated to **timing belt kits with water pump**, developed with the expertise of an OE manufacturer and designed to offer the aftermarket a complete, safe and reliable solution. In every kit, **Metelli directly manufactures 2 out of 3 components** – the water pump and the tensioner – while the third component, the timing belt, is selected exclusively from premium suppliers. This choice ensures full control over the system, high quality standards and technical consistency among the components, offering aftermarket professionals a complete, reliable solution with a **5-year warranty**.

At Automechanika Frankfurt, however, Metelli will present an even broader vision of its product offering. We look forward to welcoming you with many new developments, not only in cooling, but also in **transmission**, **brake parts** – including brake pads and discs – **hydraulics** and **engine parts**: product families that confirm the Group's role as a global partner for the independent aftermarket and Original Equipment.

Join us in Frankfurt, Hall 5.0 – Stand C35: an opportunity to discover the latest Metelli innovations up close and share our vision for the future of the automotive aftermarket.
